

## Individual Reflection

Week 7

Felix Oliv

What do I want to learn or understand better?

### **Current situation**

I have never worked with an online database before.

### **Goal**

I want to learn how to create and implement an online database in android

### **Plan**

I will research the best way to create an online database for android as well as how to implement it.

How can I help someone else, or the entire team, to learn something new?

### **Current situation and goal**

Same as last week

### **Plan**

Same as last week.

What is my contribution towards the team's use of Scrum?

### **Current situation**

I helped with assigning estimation of effort and story points for this week's user stories, I also tried to create smaller tasks of my user story and also updated them on the trello board whenever I'm done with a task or acceptance criteria.

### **Goal**

The goal is to be as active as possible on trello so that you can easily follow the progress that is being made.

### **Plan**

I will try to split the user stories into smaller user stories and tasks, and I will also be more active on trello, as well as in our meetings where we assign story points and estimation of effort on the stories.

What is my contribution towards the team's deliveries?

This week I created an online database using google firebase and Json as a data structure. There have been some problems while trying to switch from the fake hardcoded data we had before to the online data. Specifically the main problem was that the data from the online database was asynchronous while all the code was created for a synchronous database.
