

Individual Reflection

Week 1

Felix Oliv

What do I want to learn or understand better?

Current situation

At the moment we haven't done much more than plan for our future project, so there isn't anything specific that I want to learn. However as a whole for this project/ course I mainly want to learn how to work as a team using agile software development practises.

Goal

I would like to feel comfortable working with a team using agile practises and specifically be able to code effectively using sprints.

Plan

I hope that by doing this project my goal will be fulfilled, to make the process better I will try to learn from my mistakes as well as figure out what works and what does not work during the whole process.

How can I help someone else, or the entire team, to learn something new?

Some of the members in our team are not comfortable or haven't used github at all and I believe that i'm the only one that has used pull requests before.

There are also three or four members that haven't used android studio before. So next week I will try to help everybody to be comfortable with these two things.

What is my contribution towards the team's use of Scrum?

We haven't yet started using scrum.

What is my contribution towards the team's deliveries?

So far we have worked together to come up with a project idea as well as writing the social contract.

I created a discord channel where we will hold our meetings in the future and where most of our communication will take place.

I created a github project and made a simple structure for our documents.
