

Individual Reflection

Week 6

Felix Oliv

What do I want to learn or understand better?

Current situation

I have some experience with connecting the model to the view in android, but I'm not by any means an expert.

Goal

I want to improve my skills using mvvm to connect the view with the model in android.

Plan

I will research ways to implement mvvm and then implement it in the code.

How can I help someone else, or the entire team, to learn something new?

Current situation and goal

This week all team members have been assigned tasks that we think we can manage on our own, however if somebody needs help they can always just ask!

Plan

Same as last week.

What is my contribution towards the team's use of Scrum?

Current situation

We were a few people assigned to a user story because we felt that we could divide it in smaller parts which meant that some parts of the coding created bottlenecks for other parts. This made it so that the user story didn't quite get finished even though most of it was done. I helped with assigning estimation of effort and story points for this week's user stories.

Goal

The current goal is to divide user stories into smaller ones so that we don't have to step on each other while coding.

Plan

I will try to split the user stories into smaller user stories.

What is my contribution towards the team's deliveries?

I connected the view for the create challenge screen to the model to make it possible to create a challenge using the view. I was able to do most of the work however the view wasn't quite done so I couldn't connect the last parts from the viewmodel to the view.
